

RangeMatch Cattle Operating Snapshot

4213 Nambe Road, Indian Hills, CO 80454
CONDITIONAL · confidence LOW

1. Advisor Conclusion

Cattle operating case is conditional on the next cheap diligence step

Public evidence already frames a preliminary cattle operating picture. The largest operating theme is drink context, but the first spend remains a defined diligence action rather than a ranch tour. Hydrography layers are leads for field inventory, not proof of usable drinkers. This is provisional: answering the Agent question can refine the constraint. Primary constraint: The operating reading is still controlled by an unanswered buyer/seller assumption, not by a finished livestock-water verification. Confidence is LOW; this remains a provisional cattle operating reading.

Constraint: The operating reading is still controlled by an unanswered buyer/seller assumption, not by a finished livestock-water verification.

2. Why This Conclusion

Feed / Drink / Movement Context

Feed: Public forage context frames attention but does not finish a feed claim.

Basis: Vegetation context leads

Drink: Livestock-water inventory is unavailable from public layers for this parcel.

Basis: Water source unavailable

Movement: Parcel area frames movement scale without inventing grazable acres.

Basis: Parcel area context

3. What Changed

One question that would sharpen this view

Are you evaluating this property for seasonal grazing or a year-round cow-calf operation?

4. Next Move

Request access or title documents before travel.

Spend class: DOCUMENT REVIEW

Q1: Are you evaluating this property for seasonal grazing or a year-round cow-calf operation?

Q2: Can you provide the recorded entrance or title basis used to reach this tract?

Knowing seasonal versus year-round cow-calf changes how water demand and visit purpose should be read.

5. Evidence Footer

Parcel boundary confirmed. Mireye: parcel entry / context only - not parcel-wide proof.
